

BHAVYA JOSHI

bhavyajoshi307@gmail.com | 9167831904 | [LinkedIn](#) | [GitHub](#)

OBJECTIVE

Motivated B.Tech AI & Data Science student seeking an internship where I can apply my skills in computer vision, full-stack development, and data-driven systems. Passionate about building practical, real-world solutions — from fake currency detection to anonymous communication platforms — and eager to contribute to impactful projects in AI/ML or software development.

EDUCATION

SVKM's NMIMS — Navi Mumbai

2024 – Present

B.Tech in Artificial Intelligence & Data Science | Entering Third Year

RELEVANT COURSEWORK

Machine Learning, Artificial Intelligence, Data Structures & Algorithms, DBMS, Signal & Image Processing, Statistical Methods, Python Programming, Predictive Analysis, Cryptography & Network Security

TECHNICAL SKILLS

Languages: Python, C++, R, SQL

Libraries & Frameworks: OpenCV, MediaPipe, NumPy, Streamlit, Flask, Flask-SocketIO

Tools & Technologies: SQLite, psutil, Telegram Bot API, qrcode, Jupyter Notebook, Git, Canva

PROJECTS

Fake Currency Note Detector

Python, OpenCV, NumPy | [GitHub](#)

- Detects counterfeit banknotes by comparing a test image against a reference genuine note using ORB feature matching and pixel-level difference analysis.
- Computes a match ratio and changed-pixel count to classify the note as Genuine or Fake, and highlights tampered regions using contour detection.

Real-Time Emotion Detector

Python, OpenCV, MediaPipe | [GitHub](#)

- Detects facial expressions in real time via webcam using MediaPipe Face Landmarker to extract 468 facial landmarks per frame.
- Classifies emotions (Happy, Surprised, Angry, Neutral) using a rule-based engine measuring mouth width, eye openness, and brow position, with live metric overlay on the video feed.

Campus Network Energy Waste Auditor

Python, Streamlit, psutil | [GitHub](#)

- Monitors real-time network I/O to estimate per-access-point power consumption and projects cumulative energy leakage cost in INR across 500 campus APs.
- Streamlit dashboard visualises live power draw vs. efficiency target, and simulates a Digital Deep Sleep Protocol that cuts per-AP draw from 7.5W to 2W.

Sampark — Anonymous Vehicle Contact System

Python, Flask, SQLite, Telegram Bot API | [GitHub](#)

- QR codes affixed to vehicles direct bystanders to an anonymous contact page; one-tap alerts (blocking, accident, lights on) are forwarded instantly to the vehicle owner via a Telegram bot.
- Real-time anonymous chat built with Flask-SocketIO; chat history persisted in SQLite, with owner notified via Telegram when a new conversation is initiated.

EXPERIENCE

Community Service Intern — Vivekanand Seva Mandal

2024–25

Semester II, B.Tech Community Service Program

- Conducted rural outreach across villages (Vihigaon, Umbravane, Daand) — carried out lifestyle surveys, assessed water management infrastructure, and recommended well-repair and groundwater retention solutions.
- Delivered child counseling sessions on hygiene, education, and career guidance, and co-organized a career guidance event for 12th-grade students covering engineering branches and CAP Round admissions.
- Designed promotional materials using Canva and managed social media campaigns across Instagram, Facebook, LinkedIn, and Twitter to drive event awareness.

ACHIEVEMENTS & CERTIFICATIONS

Echelon 2.0 — Overnight Hackathon

NMIMS Navi Mumbai

Built the Campus Network Energy Waste Auditor in an overnight college hackathon — a live Streamlit dashboard tracking idle power consumption across campus access points and simulating energy-saving protocols.

CS50: Introduction to Computer Science

Harvard University (Online) — In Progress

Completing Harvard's foundational CS50 course covering algorithms, data structures, C, Python, SQL, and web development.
